

Manipulating Animation Keyframe Sequences

This method allows to modify specific keyframes of a previously initialized keyframe sequence.

Define Keyframe Values

Size of array must be equal with the number of values that are already assigned to each keyframe (numberOfComponents).

```
Float keyFrameManipulationValues[3] =  
{  
    1.0, 1.0, 11.0  
};
```

Set Keyframe Values

Values will be attached to one keyframe.

```
m_keyframeSequence->SetKeyframeValues(1, keyFrameManipulationValues[0]);
```
