

# Candera System

## Localization

Interface for `Internal::LocalizableStringData` and `Internal::ParameterizedLocalizableStringData` has been changed.

Overloaded placement operators *new* and *delete* have been replaced by `Internal::LocalizableStringData::Create` and `Internal::ParameterizedLocalizableStringData::Create` methods.

These were introduced to better handle the allocation and creation of new instances. As the default placement *new* operator is used within the implementation of `Create` methods, the matching operator *delete*(*void\** *pMem*, *void\**) had to be added also.
