GroupBox

The GroupBox offers an easy way to combine RadioButtons to a RadioButtonGroup. The special functionality of this Control is to select just one selection object (RadioButton) at the same time. So if one of the objects get selected, the others automatically get deselected.

Furthermore it is possible to set a node as default selected object.

> There can also be a Layouter attached as child of the GroupBox to order the RadioButtons.

The visual appearance can be configured with a background image (9Patch Image) which can be resized by using the Layout.

Properties

Property Name	Type	Description
Default Selected Object	Node	Selection Object (e.g. RadioButton) which shall be selected by default.
Enable Background	bool	If true, Background gets rendered.
Background Image	Candera::Image2D	Background Image of the GroupBox. Can be resized by Layout Settings of the Control.
Blend Type	BlendType::Enum	The blend type that will be set on the affected nodes.
