Map

Geocoding

Provides forward and reverse geocoding functionality.

About implicit roles of ChildNodes

- For forward geocoding the text from a child node with name "Name" is used.
- For backward geocoding the text from a child node with name "Address" is used.
- The child nodes should be of type Node2D with one child TextNode2D.

Common Properties

Property Name	Type	Description
LocationList	Candera::AbstractNodePointer	List to populate with matched locations.
ItemTemplate	Candera::AbstractNodePointer	Template used to populate the list.
MaxItems	FeatStd::Int16	Maximum number of matches to show.
DelayBetweenRequests	FeatStd::UInt32	Number of milliseconds to wait between geocoding requests.
