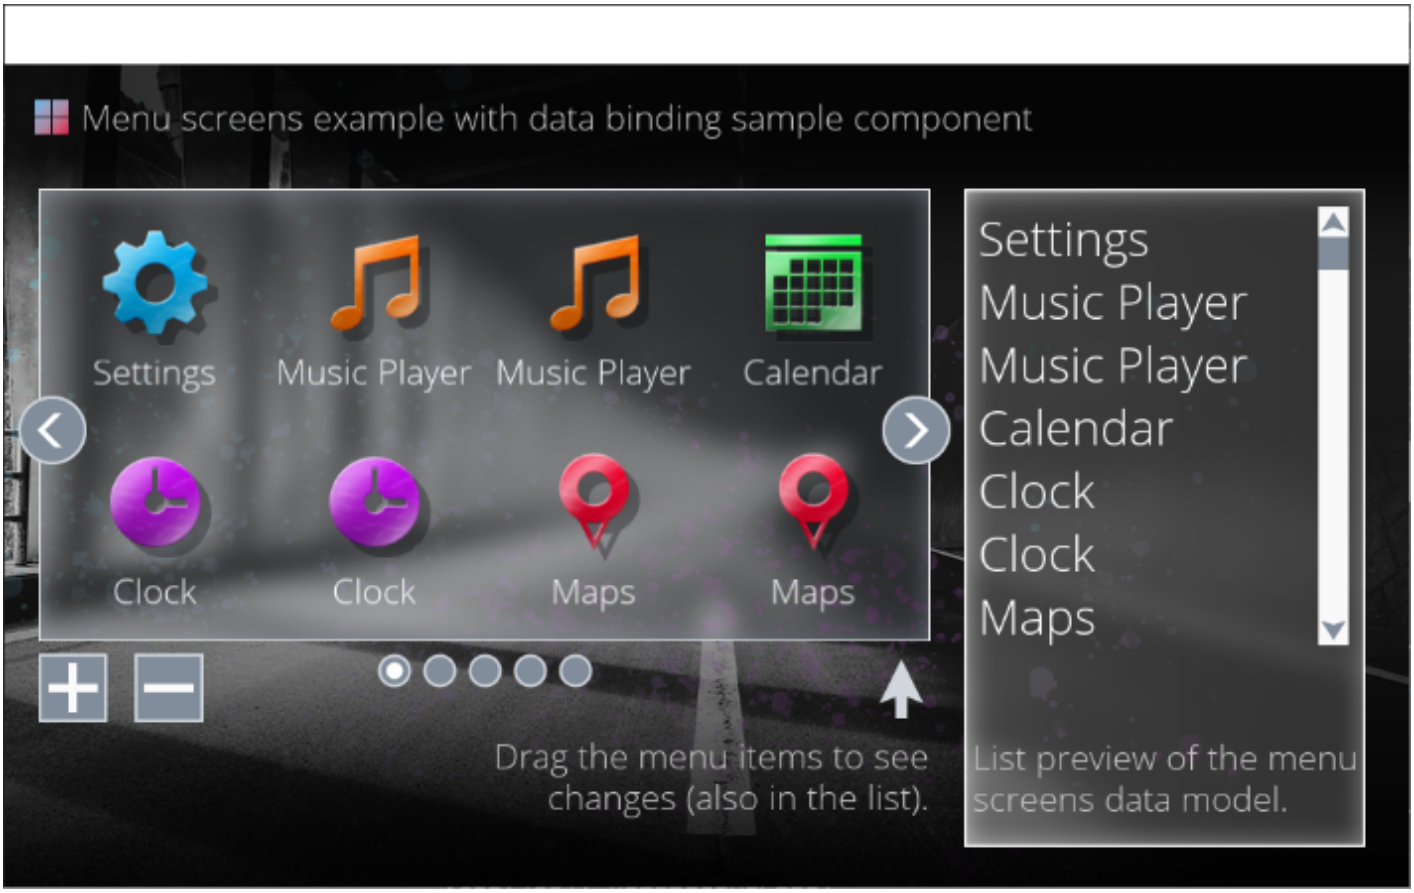
MenuScreens Solution

Summary

A solution exemplifying the use of the Menu Screen Control with DataBinding using sample component.



Purpose

The user can see how to use the *Menu Screen* Control and gets to know the core properties and how their values affect the Menu Screens' display.

Description

It contains a *Menu Screen* control with several items (to represent two pages).
The data model (sample component) contains data representing more than two pages, so MenuItems are re-used on page change.

Data model (component) should support:

- Reading items from fixed data storage
- Updating MenuScreens when data in storage changes
- Deleting items on request from MenuScreens
- Reordering items on request from MenuScreens
- Storing items to fixed data storage on change
- Runtime creation of new items (if needed), is handled on component side
